Hi Melody and Camille,

I was out onsite today conducting my weekly site inspection, and thought I would pass along the attached photos of the pipe, and energy dissipator that is now installed onsite. Camille, I have also uploaded these photos to the project Sharepoint.

The system looks like it is working well, and not creating additional erosion, but I'm not sure where we left this last with NextGen, since it was my understanding that they decided to proceed with installation of the permanent drainage system instead.

Please let me know if you would like any additional information from me. My next scheduled site visit will be Monday (3/16/20), which will be after this weekend's forecasted rain.

Thanks so much,

Jessie Henderson-McBean

EXTERNAL: This email originated from outside SWCA. Please use caution when replying.

At a glance we will also want to know length of pipe and approximate elevation change between strip drain and energy dissipator. Also, what are they using for the dissipator rock? 4-6"?

Importance: High

Hi Melody,

Please see attached plan. My comments are:

- This should be marked as Erosion Control and temporary
- Need lot lines as orientation of where this will be installed on the Lots
- Need size of energy dissipater area -- Copying Sherry just to make sure this is ok to do (probably need to avoid areas of fill)

What do you think?

Hi Camille,

Please see attached storm water dissipater by pass for run off coming from Lexington, New Brunswick and Cobble hill streets.

Thanks,
Noel
