Subject: RE: Highlands mitigations problems

Dear Supervisors,

I response to the below email, I am writing to inform you that staff does not agree with the assertion that required mitigation has not been performed - we are working with Mr. Michaels to provide him with all of the relevant documentation. In addition, as we have pointed out to Mr. Michaels before, the comparison of the visual simulation provided in the EIR and the photo of current construction is a misrepresentation, as the photo of current construction is taken at a closer location than the photo that was used to produce the visual simulation in the EIR.

Please let me know if you have questions or need more information.

Sincerely,
Steve

Dear Staff and Honorable Supervisors,

It has come to the public's attention through diligent research that grading investigation mitigation GEO-2b was never performed on lots 5-8.

In addition, despite hours and hours of trying, Mitigation AES-1, even when combined with all height-and-visual-related data encompassed throughout the EIR and BOS approval, does not make it possible for the community to visually understand what is coming our way.

Many in the community are living in a state of terror about both of the above. This is not hyperbole.

Neighbors are heartbroken and traumatized. The attached photos of lot 11 speak volumes.

How can the public reconcile all of this?

-Dave
